gewidmet

Seht Ihr den Mond dort stehen,
 er ist nur halb zu sehen
 und ist doch rund und schön -
 so sind wohl manche Sachen,
 die wir getrost belachen
 weil unsre Augen sie nicht sehn!

verschon uns Gott mit Strafen
 und laß uns ruhig schlafen
 und unsern kranken Nachbarn auch!

Diese Arbeit erhebt keinerlei Anspruch auf Vollständigkeit. Ihre Entstehung verdankt sie der Sammlung von Literatur der Autorin selbst, für eigene Zwecke. Die Aufschlüsselung der Bibliographie nach wenigen, wichtigen Gesichtspunkten erleichtert es dem Benutzer bereits bekannte Dinge zu finden und so zu vermeiden, bereits bekannte Dinge selbst "neu zu entdecken". Das Thema der Sterblichkeit von Menschen im Säuglingsalter ist von so grundlegender Bedeutung, daß dieses Werk - auf breiter Basis angelegt - als ausführliche Informationsquelle nützlich sein wird obwohl es sich scheinbar nur um die Erforschung einer einzigen Krankheit handelt.

Der Schlüssel für diese Sammlung ist in vier Oberbegriffe eingeteilt: Klinik, Mikrobiologie, Biochemie und Genetik. Die vier Oberbegriffe teilen sich weiter in fünfzehn Unterbegriffe auf. Die letzteren werden in einer Tabelle links neben der Literaturangabe gefunden. Daneben werden rechts am Rande Hinweise auf Grundlagenforschung, Erstbeobachtungen oder Erstbeschreibungen und neue Hypothesen beachtet.

Die Arbeit ist chronologisch gegliedert und gibt innerhalb der einzelnen Jahre die Namen der Autoren der Veröffentlichungen - nach dem ABC geordnet - an.

Zu dem Begriff der Klinik gehören:

- I. Krankheitsfälle
- II. Diagnose
- III. Therapie
- IV. Krankheitssymptome und Krankheitsbild
- V. sehr seltene Krankheitssymptome
- VI. Anatomie, Histologie, Pathologie
- VII. Tierversuche und Studien am Menschen
- VIII. zusammenfassende Arbeiten: Pathogenese, Ätiologie, Ursachen, Prognose

Zu dem Begriff der Mikrobiologie gehören:

- IX. Bakterien, Viren, Fungi, Würmer
- X. Immunologie

Zu dem Begriff der Biochemie gehören:

- X. Immunologie
- XI. Enzyme, Proteine, Lipide, DNS, Schleime, Vitamine

Zu dem Begriff der Genetik gehören:

- XII. Schweißdrüse und Elektrolyte
- XIII. Teste
- XIV. Blut, Serum, Plasma, Lymphe
- XV. familiäre Erblichkeit, Erkrankung Erwachsener, Zwillingsforschung u. s. w.

Beachtenswerte Arbeiten sind bezeichnet:

- mit E = Erstbeobachtung
 mit G = Grundlagenforschung
 mit I = neue Idee, Erklärung, Hypothese, Prognose

I. III. V. VII. IX. XI. XIII. XV.
II. IV. VI. VIII. X. XII. XIV.
